

Java

```
class Solution {  
    public int maxTransactions(int[] transactions) {  
  
    }  
}
```

JavaScript

```
/**  
 * @param {number[]} transactions  
 * @return {number}  
 */  
var maxTransactions = function(transactions) {  
  
};
```

TypeScript

```
function maxTransactions(transactions: number[]): number {  
  
};
```

C++

```
class Solution {  
public:
```

```
    int maxTransactions(vector<int>& transactions) {  
    }  
};  
-----
```

C#

```
public class Solution {  
    public int MaxTransactions(int[] transactions) {  
    }  
}
```

Kotlin

```
class Solution {  
    fun maxTransactions(transactions: IntArray): Int {  
    }  
}
```

Go

```
func maxTransactions(transactions []int) int {  
}
```
